

About Us

The Lecitech group is the result of the dedication of our family, in particular the brothers Juan Pablo and Manuel Muñío, to sharing the know-how acquired since childhood on their own farm and after studying Engineering and holding various positions in the industrial world.

Its mission is to improve competitiveness in the agricultural sector and its promise to their customers is to do that while improving the quality of life of those who form the backbone of the rural environment.

It has a development team for our own products, with professionals who spend a lot of time in the field. This allows them to offer a catalogue of standard equipment with performance proven on their own farm. Although they are also capable of adapting their products to the requirements of different markets.

All its products surpass strict quality controls before leaving the factory and Lecitech has over 2000 m2 of covered facilities which allows it to store the standard products with the highest turnover, in order to serve its customers in record time.

Products

AGRICULTURAL EQUIPMENT
