

About Us

The pillars on which the objectives of Distromel are based are on the disposition of its R&D departments and its more than 20 years of experience in offering a robust and innovative product that allows to adapt to the needs of the client and the market.

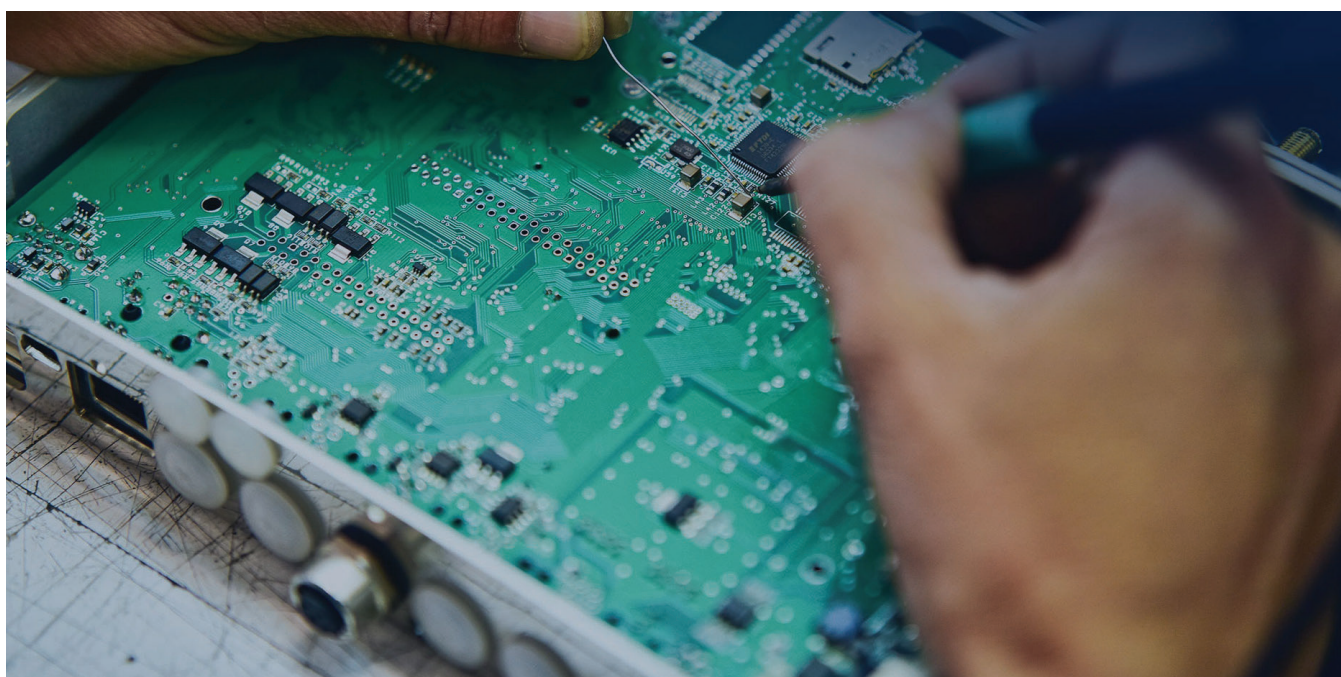

Using mechatronic engineering, Distromel has achieved to create control and measurement systems for the logistics, industrial, environmental and agricultural-livestock sectors.

Developing improvement projects for companies has provided to Distromel an ambitious projection of the future in which employees are a fundamental part and a differential fact.

Distromel's vision has always been considered part of society with the principle that improving what we do, it will make better our surroundings.

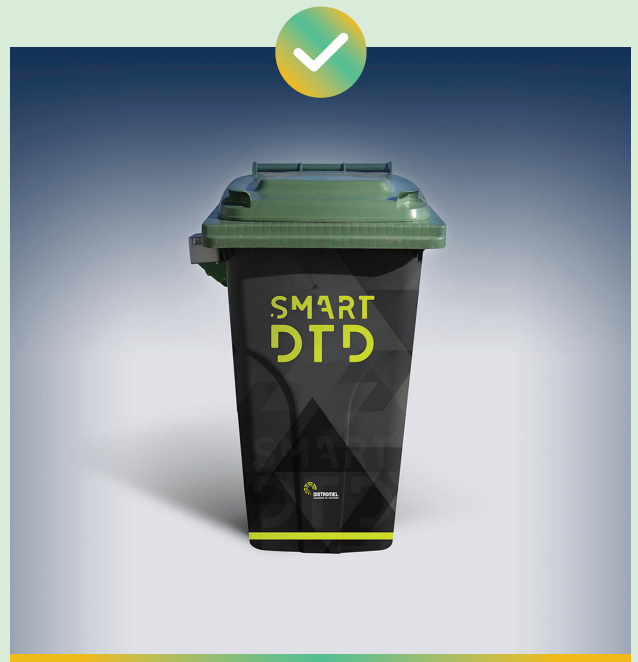

Services

Business divisions:

- Environmental sector: Information and communication technology adapted to the urban services of a city.
- Industrial sector: Dynamic weighing equipment with the best service and robustness in loaders, backhoes and dumpers.
- Logistics sector: Dynamic weighing systems for forklifts and handling equipment tailored to your own needs.
- Agriculture-livestock sector: Unifeed mixer trucks, silos filling sensors and static feed plants to optimize livestock feed.
