

About Us

Agro Intelligent SL is a young company based in rural areas (Monreal del Campo, Teruel) whose purpose is developing technologies that serve to facilitate and make profitable the work of farmers, ranchers and all those who live in the field.

By implementing IoT (internet of things) in rural areas (in a broad concept of rural areas) we manage to improve and favor processes, adjusting inputs and the environmental footprint of human activity, achieving improvements in pursuit of the circular economy , which is nothing more than taking advantage of more resources (inputs, water, energy) and agricultural by-products for the benefit of our users.

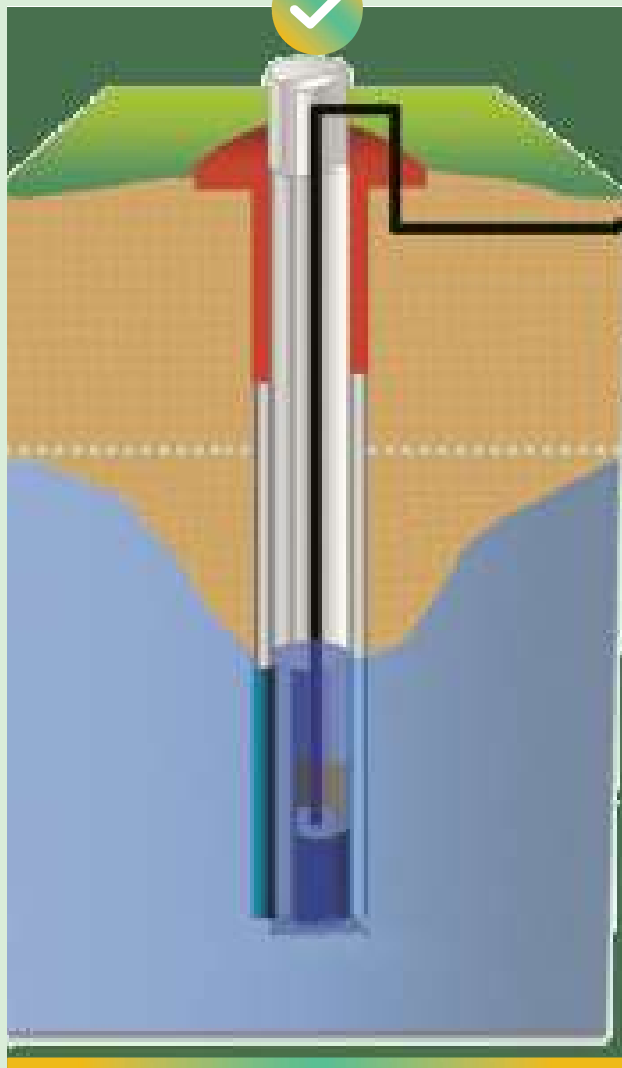

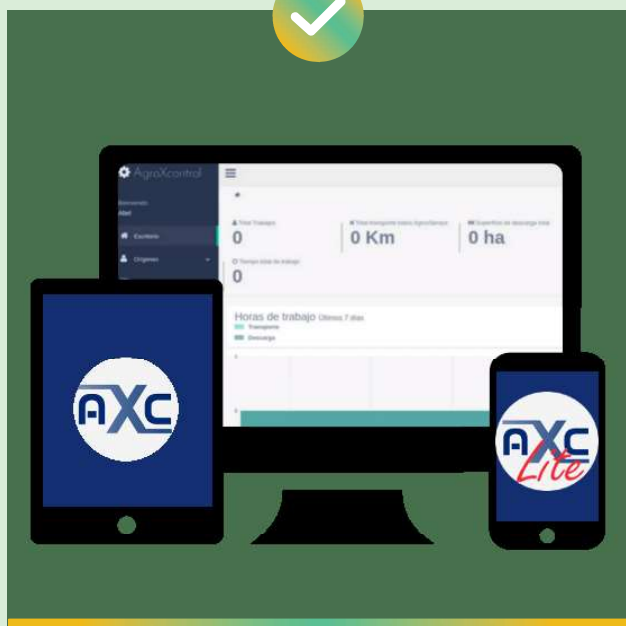

Products

AGROXCONTROL is a platform for the control and management of agricultural applications. It allows the farmer to easily take data in the field, from his tractor, in an ultra-easy way to be able to fill in the field notebooks and also help him to dynamically adjust the doses of products supplied to the field.

FERTIFÁBRICA: Make your own fertilizers taking advantage of all the fertilizer capacity of the slurry. Use up to 4 different components to supplement your slurry.
