

About Us

Remolques Beguer, since 1955, has evolved from the blacksmith-workshop to the modern facilities and industrial equipment that it has in Barbastro, where trailers with a high technical and quality level currently go out to all of Spain.

The collaboration with the farmers, the experience accumulated during all these years and the knowledge of the problems of the field, have allowed us to respond to the current transport needs. Offering a type of trailer for each client, it makes versions of each model, adaptable to the needs of each client and operation.

Attending to the requirements of each client, Beguer produces versions of each model, adaptable to the needs of each farm.

In the manufacture of Beguer Trailers, the most advanced techniques of material handling and component assembly are combined with the artisanal dedication of a responsible human team that guarantee the quality, precision and accuracy of the finish of its products.

Remolques Beguer is the first national manufacturer to obtain the UCA (Automobile Certification Unit) and ISO 9001: 2008 certificates, which guarantee the quality and competitiveness of our products.
