

## About Us

Founded in 2008 in Zaragoza, S.G.I was created with the aim of facilitating the integration of innovative multiplexing systems in the national auto body sector.

Our main goal is to help OEMs to manufacture their machinery by providing engineering services or products through a single point of contact, the SGI Group.

We have the capabilities to implement turnkey projects. Customized solutions are the hallmark of SGI. Its strength lies in its flexibility in providing complete and partial solutions such as design engineering services and systems integration, consulting, training and support, distribution of electrical materials, multiplex electronics, power electronics, hydraulics and/or wiring harness and electrical cabinet manufacturing.

SGI Group is the present-day iteration of SGI to provide our customers with better service. It's a leading group of companies in the integration of systems: multiplex electronics, hydraulics and hybrid and electric traction systems.

SGI Group boasts an experienced, international, multidisciplinary engineering team and its own engineering plant for the design and manufacture of large-scale wiring harnesses.

# Services

## ENGINEERING

Consulting  
Advisory services  
Software  
Hardware  
Systems integration

## PROJECTS

Prototype fabrication  
Production series  
Turnkey services

## COMPONENTS

Supplies  
Sales services

## WIRING HARNESSES

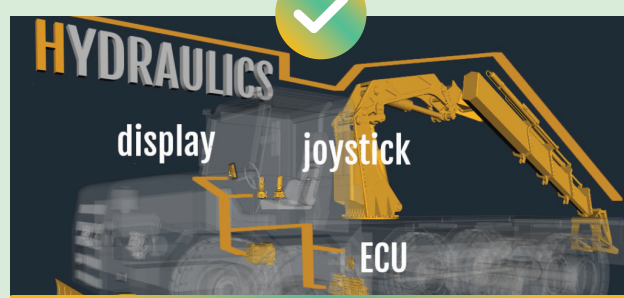

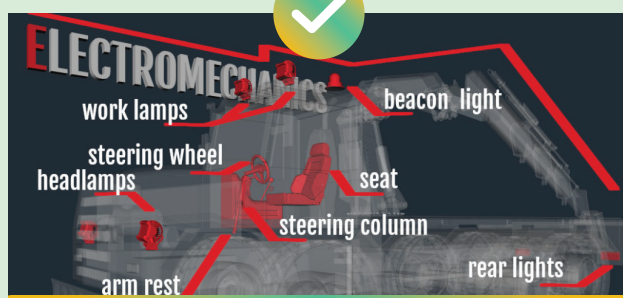

Design  
Engineering  
Prototype design  
Short-run production

## SUPPORT

Training  
Technical support  
Post-sales service

## MODEM/GPS

Remote Diagnostics  
Remote Monitoring  
Fleet management
