

## About Us

GEEZAR is a consultancy specialized in studying the technological needs of companies and their development. Likewise, they help in the financing of the digitization and technological renovation plan towards a future 4.0 performance in any sector.

The company is Spin-Off of the University of Zaragoza since April 2014 and has launched the URSOS software for simulation and calculation of energy demands and sustainability indicators.

Its main areas of work are the development and marketing of monitoring technologies and energy and software engineering, betting on the development of tools to support energy auditing.
