

About Us

Fertilizer manufacturers with a total commitment to rational, sustainable agriculture and the rural environment.

We provide solutions for the agriculture of the future, through the use of natural resources such as leonardite and the reuse of substances of high agronomic value.

With its own leonardite mines as raw material and innovation as its hallmark, our new plant takes advantage of the native resources of the Ariño region (Teruel).

FORGASA reinforces the Plant Nutrition and Protection division of the SAMCA Group, with more than 40 years in the market.
